

Group One Lessons Learned

Most of this cycle was used to integrate everything together. We spent a lot time testing all of the features that hadn't yet been implemented. We learned about GUI testing software, specifically TestComplete, and utilized it in testing our software.

We definitely improved our time management this cycle. We were running tests from the start of the cycle to the end, and we didn't waste time chasing leads that went nowhere. We went into the cycle with a tight vision of what we were going to do and deadlines and we did a pretty good job of sticking to them.

Adjusting tasks at the end of the last cycle helped a lot to streamline the work. Each person could focus on one task, instead of jumping around and trying to do everything.

We maintained our organization a lot this cycle, and had a good chunk of the paperwork up to date before the end of the cycle.

Overall, this was the most successful cycle overall. We had a good chunk of the project finished at the end of cycle two, but they were all in different places. Putting everything together gave us a sense of accomplishment and we are proud of the product we developed.
